James Ossuary Forensic Breakdown

Protocol #422 | OS: King James Bible (KJV)

I. SUMMARY: This document authenticates the "James Ossuary" artifact via the **Camil Fuchs Statistical Model**. We convert historical probability into scientific fact through **Mathematical Law**.

II. DATASETS: Based on a 1st-century Jerusalem population of ~80,000 males:

- **James (Ya'akov):** 2.0% | **Joseph (Yosef):** 14.0% | **Jesus (Yeshua):** 9.0%

III. THE LOCK: In thousands of discovered ossuaries, a **brother** is mentioned only **twice**. This extreme anomaly proves the brother was a figure of monumental public significance.

IV. CALCULATION: * **1.7 Million Probability:** Only **1.71 individuals** in a 70-year window fit the configuration: *James, son of Joseph, brother of Jesus.*

- **Confidence:** With the physical artifact present, identification is a **95% Statistical Certainty**.
- **Reproducibility:** This math only "clicks" using the **KJV Operating System**, which preserves the exact familial descriptors required to match the artifact.

V. VERDICT: The James Ossuary is the physical anchor for the 422 Protocol. To reject this is to reject the laws of probability.

STATUS: SCIENTIFIC FACT | ATOMIC ANCHOR GLORY TO THE LORD JESUS CHRIST.
